Qualys Cloud Platform

Guidance on Supported Browsers

If you attempt to log in using an unsupported browser, like Internet Explorer 7, you'll get a message on the login page and some guidance on the browsers we do support.

Follow the link to learn about the browser versions we support. Upgrade to a supported browser for the best experience with Qualys.

Choose a CSV List Separator For Your Locale

Different regions use different CSV list separators by default. To prevent issues when importing CSV data to Excel you can now tell us the list separator to use. We'll use the separator saved in your profile whenever you export CSV data from your account, for example when downloading data lists.

Edit your profile settings

Choose the Administration utility from the module picker. Then choose My Profile below your user name and click Edit. Enter the list separator you want to use, such as a comma (,) or semi-colon (;).

The screenshot shows the 'User Edit: Patrick Slimmer (quays_tt1)' interface. On the left, a sidebar lists navigation options: Edit Mode, User Details, Profile Settings (highlighted), Roles And Scopes, Action Log, and Account Activity. The main content area is titled 'Define user configuration' and includes sections for 'Locale', 'Language', and 'Report'. The 'Locale' section has radio buttons for 'Use browser time zone' and 'Use custom time zone' (selected), with a dropdown menu showing '(GMT -07:00) Pacific Standard Time (PDT America/Los_Angeles)'. The 'Language' section is set to 'English'. The 'Report' section includes a note about WAS reports, a 'User Limit' of '200 MB', and a 'Default Download Format*' dropdown set to 'Web Archive (HTML)'. A red dashed arrow points from the text 'Enter a list separator' to the 'CSV List Separator*' input field, which contains a comma character. The 'Cancel' and 'Save' buttons are at the bottom.

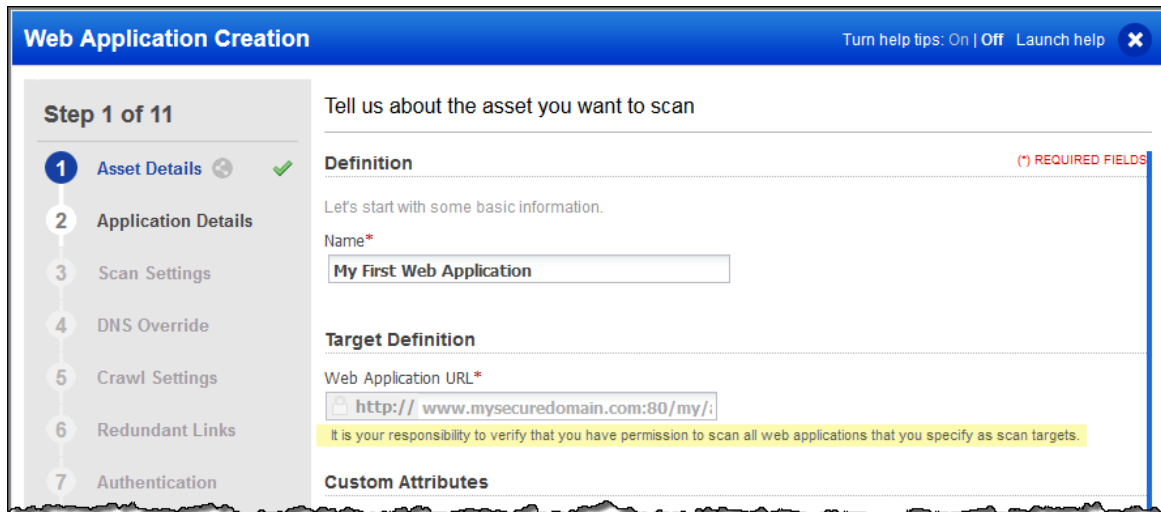

EC2 Scanning Improvements

Improvements have been made to the EC2 connector to allow scanning smaller (t1, t2, m1) instance types where allowed by Amazon scan policy.

Controls to Prevent Unauthorized Scanning

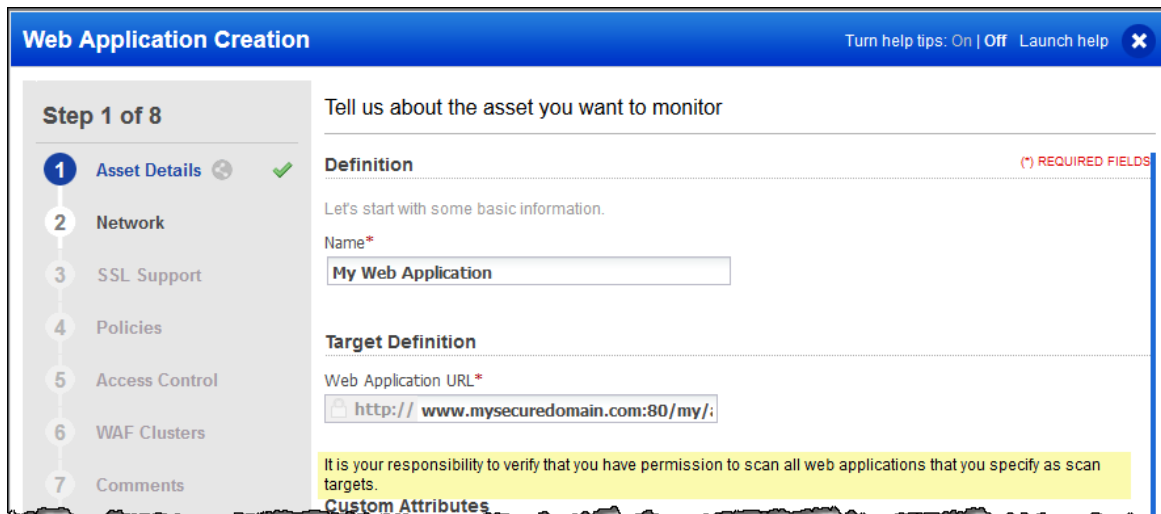

We understand the importance of controlling usage of the Qualys Scanner Appliances and confirming the appropriate authorizations are in place. Within the Qualys Cloud Suite, there are controls to prevent unauthorized scanning activity. A new confirmation message appears when adding web applications and web sites to WAS, WAF, MD and SECURE Seal. This message (shown below) explains that it is the user's responsibility to verify that they have permission to scan the web application or web site added.

Adding a web application in Web Application Scanning (WAS)

The screenshot shows the 'Web Application Creation' interface for WAS. The title bar includes 'Web Application Creation' and 'Turn help tips: On | Off Launch help'. The left sidebar shows 'Step 1 of 11' with steps: 1 Asset Details (checked), 2 Application Details, 3 Scan Settings, 4 DNS Override, 5 Crawl Settings, 6 Redundant Links, and 7 Authentication. The main content area is titled 'Tell us about the asset you want to scan'. It has a 'Definition' section with a '(*) REQUIRED FIELDS' indicator and the instruction 'Let's start with some basic information.' The 'Name*' field contains 'My First Web Application'. The 'Target Definition' section has a 'Web Application URL*' field with 'http:// www.mysecuredomain.com:80/my/'. A yellow warning box states: 'It is your responsibility to verify that you have permission to scan all web applications that you specify as scan targets.' Below this is a 'Custom Attributes' section.

Adding a web application in Web Application Firewall (WAF)

The screenshot shows the 'Web Application Creation' interface for WAF. The title bar includes 'Web Application Creation' and 'Turn help tips: On | Off Launch help'. The left sidebar shows 'Step 1 of 8' with steps: 1 Asset Details (checked), 2 Network, 3 SSL Support, 4 Policies, 5 Access Control, 6 WAF Clusters, and 7 Comments. The main content area is titled 'Tell us about the asset you want to monitor'. It has a 'Definition' section with a '(*) REQUIRED FIELDS' indicator and the instruction 'Let's start with some basic information.' The 'Name*' field contains 'My Web Application'. The 'Target Definition' section has a 'Web Application URL*' field with 'http:// www.mysecuredomain.com:80/my/'. A yellow warning box states: 'It is your responsibility to verify that you have permission to scan all web applications that you specify as scan targets.' Below this is a 'Custom Attributes' section.

Adding a web site in Malware Detection Service (MD)

Site Creation

Turn help tips: On | Off Launch help

Step 1 of 5

- 1 Site Details
- 2 Scan settings
- 3 Crawl exclusion lists
- 4 Scheduling
- 5 Review and Confirm

Add site details manually or by uploading a CSV file.

Source file (CSV Format) (*) REQUIRED FIELDS

I have a CSV file to upload

Site Details

Please enter information about the site you would like to scan for malware.

Title*

Site URL*

It is your responsibility to verify that you have permission to scan all web sites that you specify as scan targets.

Tags

Adding a web site in SECURE Seal

Add New Web Site

Welcome to Qualys SECURE Seal

Please enter the information about the web site which you would like the seal to be displayed on.

Setup Type:

- Manually Enter (in the fields below)
- Import from another module...

Title:

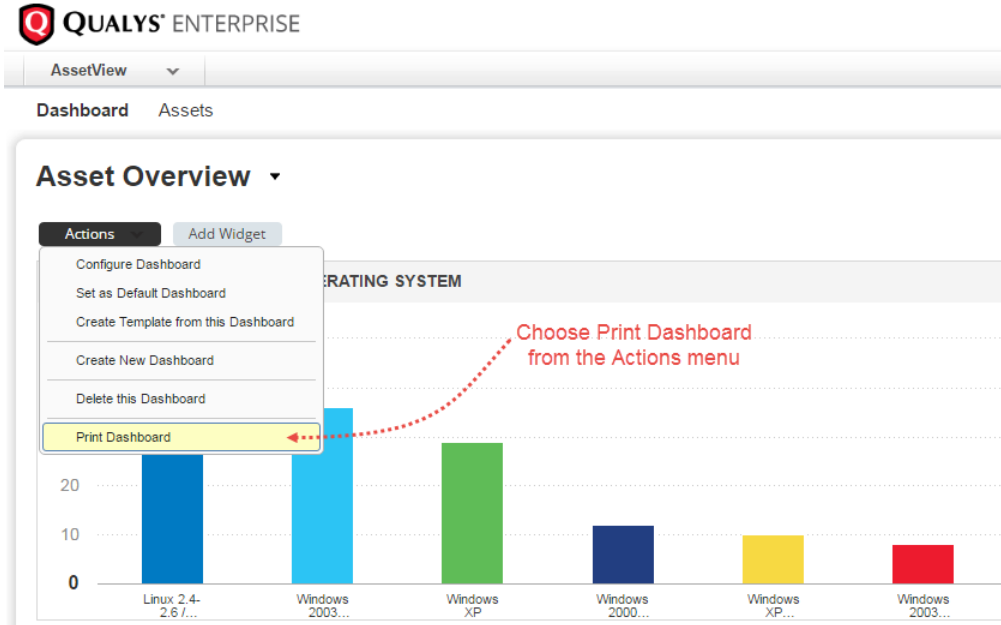

URL:

It is your responsibility to verify that you have permission to scan all web sites that you specify as scan targets.

Qualys AssetView

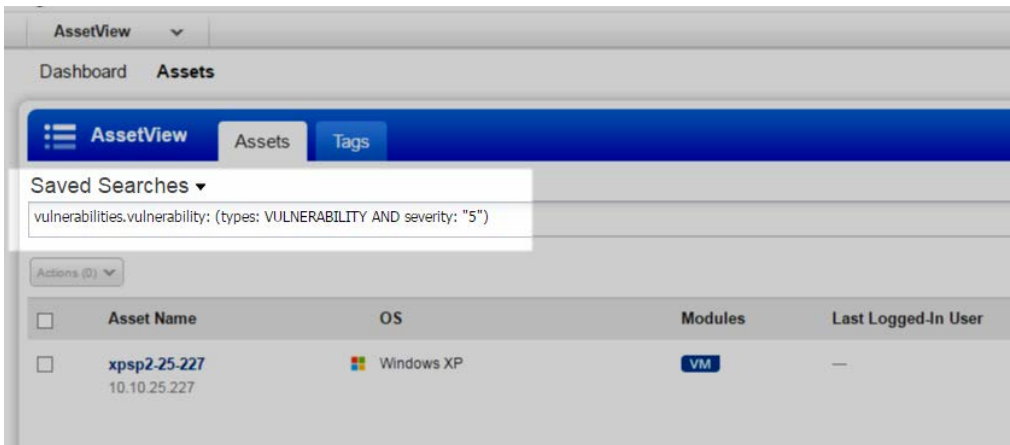

New Option to Print Your Dashboard

Build Nested Queries Around Vulnerabilities

This saves you time and gives you precise results! A nested query lets you search on multiple vulnerability fields. These same queries are supported using Qualys ThreatPROTECT. Keep in mind only 1 nested query (in parentheses) is allowed.

For example you might be interested in finding confirmed vulnerabilities that are severity 5.

Quickly Create a Widget from Your Query

The search box gives you the power and flexibility to search all of your assets instantly. Now you can transform your query into a widget on your dashboard. Once you have your query the way you want, just select “create widget” (1), customize how the widget looks (2), and click Add to Dashboard. That’s it! We’ll add the new widget to the dashboard you currently have open.

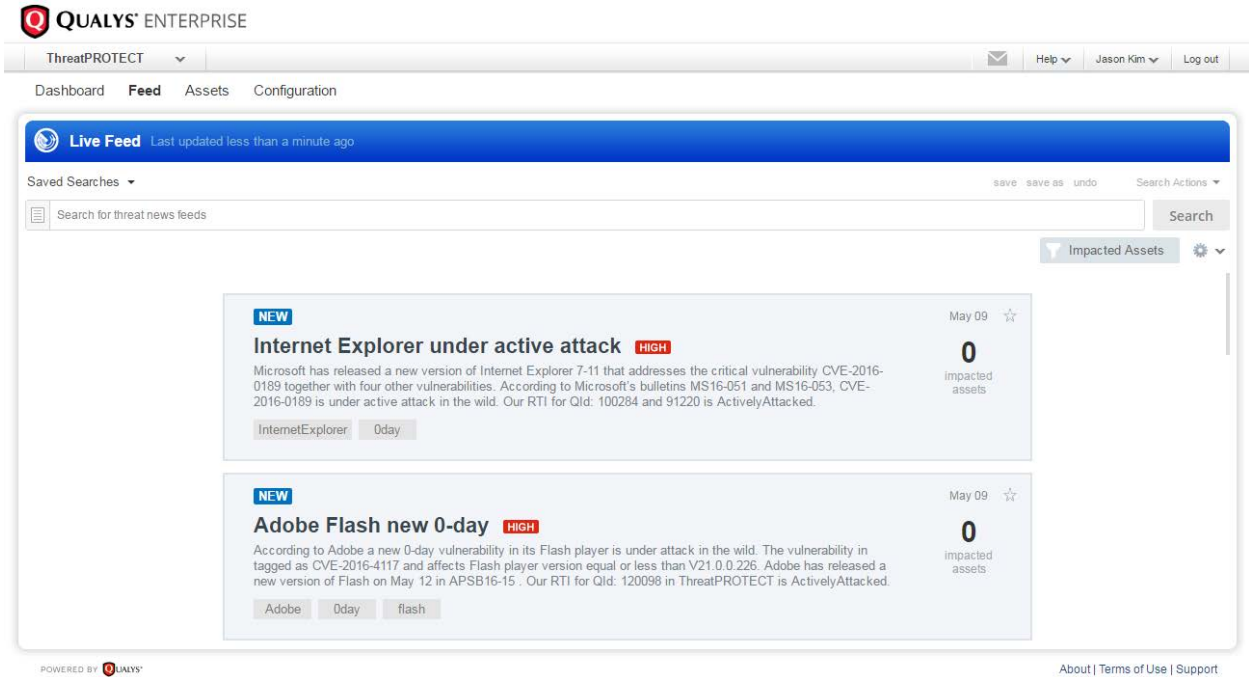

The screenshot displays the Qualys Enterprise interface. At the top, the 'AssetView' dropdown is visible. Below it, the 'Assets' tab is active, showing a search bar with the query: `vulnerabilities.vulnerability: (authTypes: WINDOWS AND severity: 5 AND patchAvailable: true)`. A red circle with the number '1' highlights the 'create widget' button next to the search bar. Below the search bar, a table lists assets with columns for Asset Name, OS, Modules, Last Logged-In User, Activity, Sources, and Tags. Two assets are visible: `xpsp2-25-227` and `10.10.25.38`.

A dialog box titled 'Add a new widget to your dashboard' is open, showing configuration options. A red circle with the number '2' highlights the 'Count' widget type. The dialog box is divided into two sections: 'Select data for your stats using the form below' and 'Customize the way that your widget looks'. The 'Select data' section includes fields for 'Widget Title' (Windows authentication required, severity 5, patchable), 'Query' (vulnerabilities.vulnerability: (authTypes: WINDOWS AND severity: 5 AND patchAvailable: true)), 'Categories' (tags.name), and 'Limit to' (TOP 10). The 'Customize' section includes a donut chart visualization, 'Extras' (Show Legend, Show Labels), and 'Layout' (Pie, Doughnut). A red circle with the number '3' highlights the 'Add to Dashboard' button at the bottom right of the dialog box.

Qualys ThreatPROTECT

Easily Identify New Feed Articles

Feed articles will be marked **NEW** the first time you visit the Qualys real-time threat intelligence feed. Subsequently any new articles added since the last time you visited will be marked **NEW**.

Improvements to AssetView are also available for ThreatPROTECT. Be sure to check them out!

Qualys Cloud Agent

New Cloud Agent Permissions

Now you can assign some or all permissions to subusers by editing user role permissions using the Administration utility. (All Managers are assigned all permissions by default as in previous releases.)

We've added 3 permissions groups

- CA Activation Key Permissions
- CA Configuration Profile Permissions
- CA Agent Permissions

CA Activation Key Permissions

- View Activation Key
- Create Activation Key
- Edit Activation Key
- Enable Activation key
- Disable Activation key
- Delete Activation Key
- Enable Module for Activation Key
- Add Tags to Activation Key

CA Configuration Profile Permissions

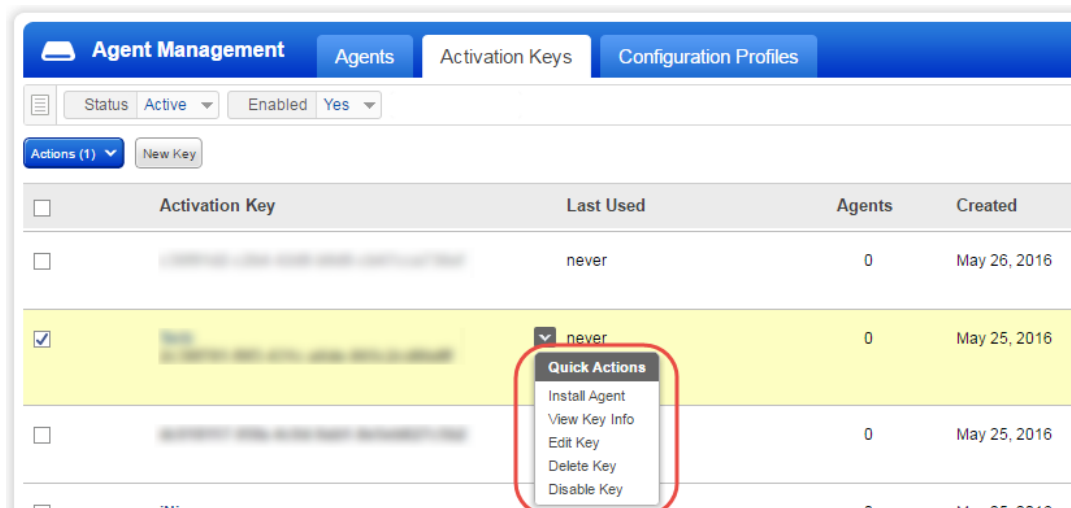

- View Configuration Profile
- Create Configuration Profile
- Edit Configuration Profile

CA Agent Permissions

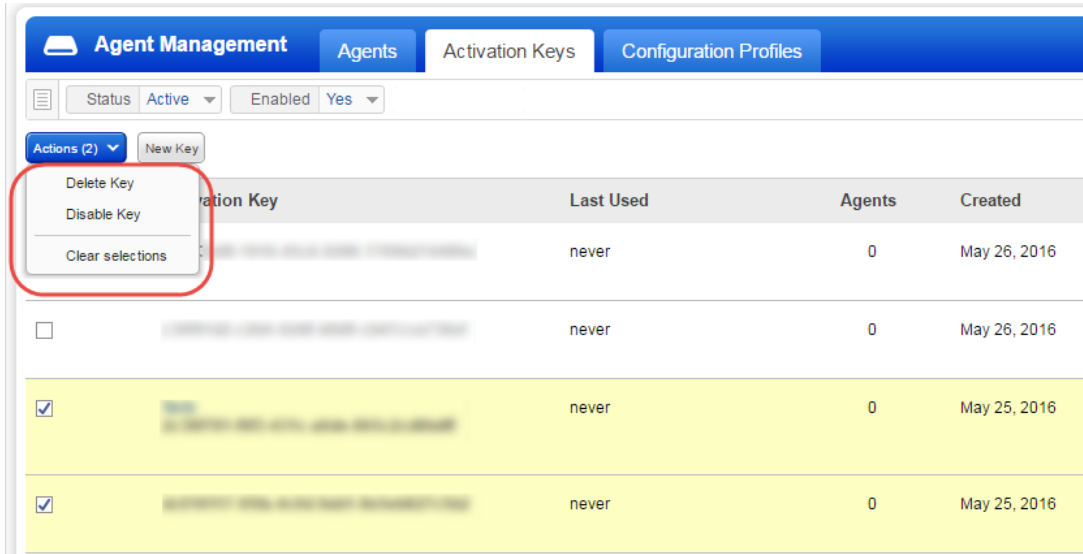

- Install Agent
- Uninstall Agent
- Activate Agent
- Deactivate Agent

Improvements to Activation Key Management

We've added options to help you edit, delete, enable/disable activation keys in your account. New options appear on the Quick Actions menu.

Want to take actions on multiple activation keys at once? No problem, just use the new options on the Actions menu. The options Delete, Disable/Enable will be available depending on the key settings. If any key has an agent, the Delete option is not available.

Good to Know

- What properties can I edit for a key? You can change the title, associated tags, enable/disable modules, and set limits.
- Want to delete a key from your account? This is possible only if the key has no active agents associated with it.
- What happens when I disable a key? You can still view the key, but you can't edit the key, or install agents using the key.

Select Columns for Your Agents List

Now you can customize the look of your agents list. The new Columns menu lets you choose what columns you'd like to display.
