[New Widgets Added to your Dashboard](#)

Web Application Scanning

[Option Profile – New Form Crawl Scope option](#)

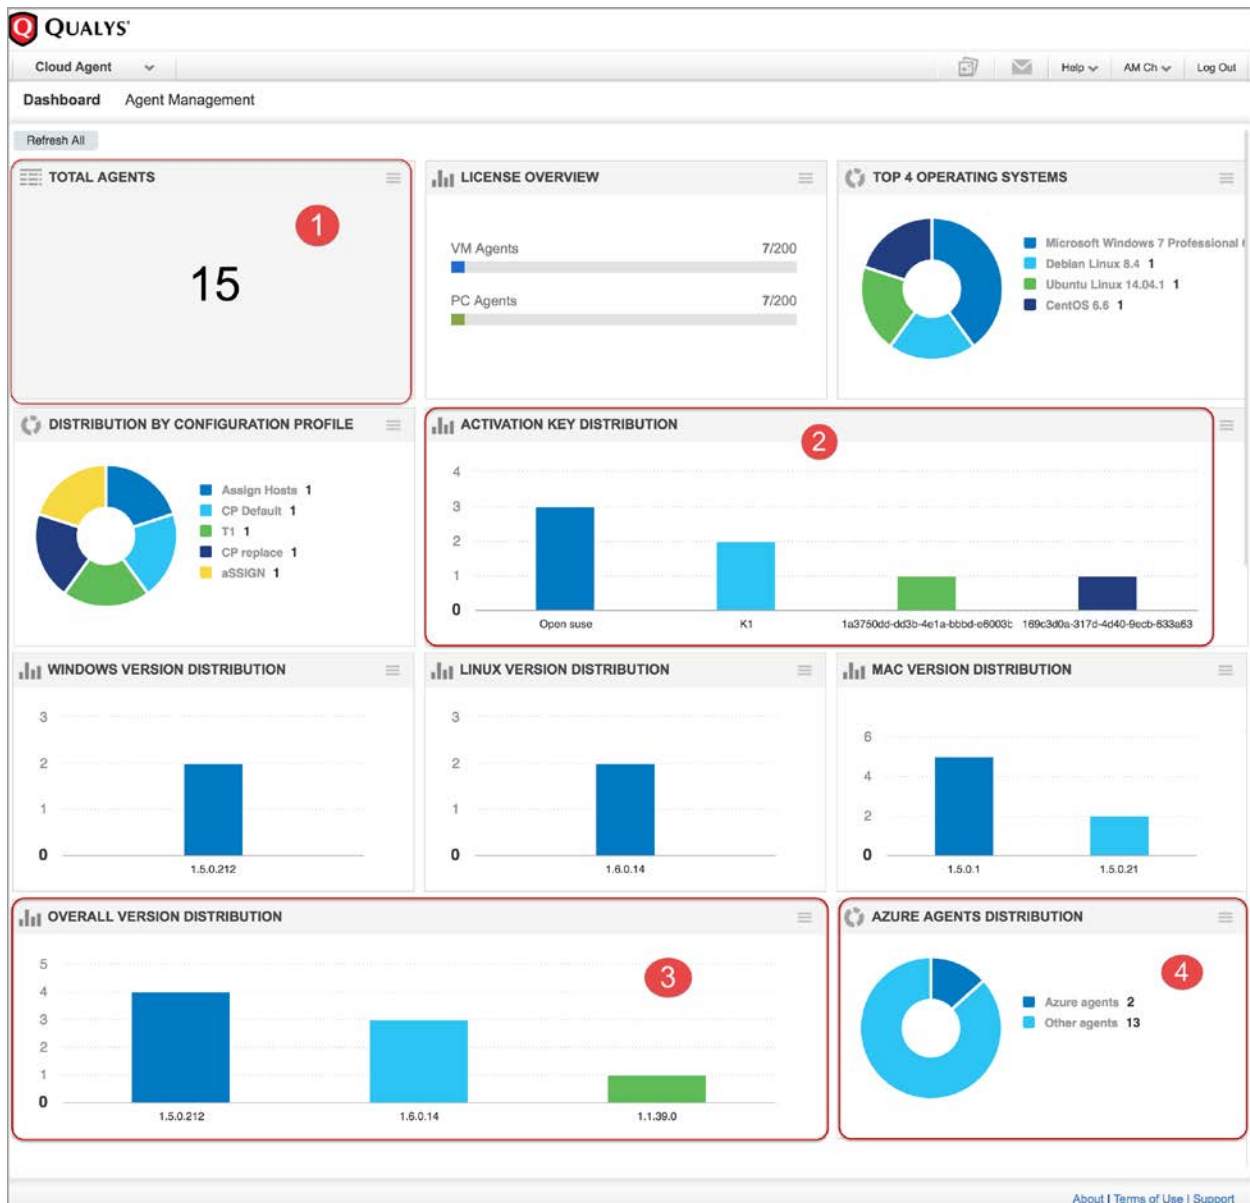

Searching Cloud Agents Just Got Easier

Now when you search for agents by active modules type you can simply choose from a list of values that we provide. This way you can be sure your query is set up correctly.

New Widgets Added to your Dashboard

We added four new widgets to the dashboard for a quick information on total agents and distribution of your agents (activation key, version and azure agents).

Web Application Scanning

Option Profile – New Form Crawl Scope option

Forms considered unique are reported separately in your account. We'll always use form field names to calculate form uniqueness. When you select the new "Form Crawl Scope" option to include form action URI in the option profile, we'll use form action URI and form field name for determining the uniqueness of a form.

Good to Know:

To prevent forms with same fields from being ignored during the scan, you should enable Form Crawl Scope to include action URI.

The screenshot shows the 'Option Profile Creation' wizard at Step 2 of 5, titled 'Please define how the scan will perform'. The left sidebar lists five steps: 1. Profile Details (checked), 2. Scan Parameters (checked), 3. Search Criteria, 4. Comments, and 5. Review And Confirm. The main content area is 'General Settings' with a red asterisk indicating required fields. It includes a 'Form Submission' dropdown set to 'Post & Get', a 'Form Crawl Scope' checkbox which is checked and highlighted with a red box, and a text box explaining that enabling it will include form action URI in uniqueness calculations. Other fields include 'Maximum links to test in scope' (300), 'User Agent' (Example: Mozilla/4.04 (X11; I; SunOS 5.4 sun4m)), 'Request Parameter Set' (Initial Parameters (Default)), and 'Document Type' (Ignore common binary files based on file extensions). A 'SmartScan Support' section at the bottom explains advanced scanning capabilities. Navigation buttons 'Cancel', 'Previous', and 'Continue' are at the bottom.

The screenshot shows the 'Option Profile Creation' wizard at Step 5 of 5, titled 'Review and confirm this Option Profile'. The left sidebar shows all five steps completed with green checkmarks. The main content area is a review of the profile details. It includes a 'Profile Details' section with fields for Name (Test), Default Profile (No), Owner (Anjali Pingale (quays_ap14)), and Tags (no tags selected). Below this is a 'Scan Parameters' section with a table showing: Form Submission (Post & Get), Form Crawl Scope (Include form action URI in uniqueness calculation., highlighted with a red box), Maximum links to test in scope (300), Document Type (Ignore common binary files based on file extensions.), and SmartScan Support (Disabled). Navigation buttons 'Cancel', 'Previous', and 'Finish' are at the bottom.

You can also view the Form Crawl Scope defined in the option profile when you review and confirm the option profile settings.

Go to Scans > View from Quick Actions menu > Scan Settings and view the configured Form Crawl Scope for the scan.
